Switching to a New Satellite Frequency – OmniLITE 132

We recommend that if possible you also take the opportunity to upgrade your receiver to the latest version of firmware.

You will need to contact OmniSTAR to re-subscribe your receiver after a firmware upgrade.

For the OmniLITE 132 you will require a RS232 cable and the AgRemote Software

Procedure to switch satellite frequency on OmniLITE 132 via AgRemote Software

1. Connect the computer to Port B and run AgRemote.

2. Press the **ESCAPE** button until the “Home” screen appears.
3. Press ">" **RIGHT** button until the “Configuration” screen appears.

4. Press the “V” **DOWN** button once, a screen similar to below appears.

5. Press the > **RIGHT** button until the “DGPS Config” screen.
6. Press the V DOWN button until the “Satellite Freq” appears.

7. Press the > RIGHT button for the cursor to flash on the first digit.

8. Press the V DOWN and UP buttons to change the digits. Press the > RIGHT button to move on to the next digit until the desired frequency is displayed eg. 1535.1850 MHz.
9. Press the **ENTER** button to lock in the new frequency. The cursor will disappear from the screen.

CHECK THE FREQUENCY ON YOUR RECEIVER IS ENTERED IN CORRECTLY

10. Press the ESC button until the “Home” screen appears.

11. Allow 45 minutes to get the system to work.
